### **DETAILED ACTION**

1. Claims 4 and 7-9 are presented for examination. Claims 7-9 are newly added claims. Claims 1-3 and 5-6 are canceled.
2. The text of those applicable section of Title 35, U.S. Code not included in this action can be found in the prior Office Action.

### ***Continued Examination Under 37 CFR 1.114***

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/24/04 has been entered.

### ***Claim Objections***

4. Claim 4 is objected to because of the following informalities: The claim language is inconsistent. Such as "data-processing circuit" and "data processing circuit". Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:  

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
6. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2115

7. The term "substantially" in claim 7 is a relative term which renders the claim indefinite. The term "substantially" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. It is a broad term.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Connell et al. (Connell), US patent no. 5,998,978 in view of Kim (Kim). US patent no. 6,027,029.

Connell and Kim are the references cited in prior office action.

As per claim 7, Connell discloses a mobile data carrier [figs. 3, 4] comprising:

A data processing circuit [112, fig. 3]; and

a voltage regulator [308, fig. 3] operably coupled in parallel with the data processing circuit, that is configured to control the power supply voltage applied to the data processing circuit [col. 3, lines 16-19], and

a current source [304, figs. 3, 4] operably coupled in series between the data processing circuit and a power source, that is configured to provide a supply current to

Art Unit: 2115

the data processing circuit and the voltage regulator [col. 4, lines 8-12; col. 6, lines 8-12].

Connell does not explicitly disclose the data processing circuit includes asynchronously operating logic elements whose signal-processing rate is dependent on a power supply voltage applied to the data processing circuit.

However, Kim inherently discloses that a data processing circuit [fig. 3] includes asynchronously operating logic elements whose signal-processing rate is dependent on a power supply voltage applied to the data processing circuit [col. 1, lines 53-55; col. 2, lines 51-63; col. 4, line 45-col. 5, line 22].

It would have been obvious to one of ordinary skill in the art at time the invention to combine the teachings of Connell and Kim because they both disclose a smart card system, the specific teachings of Kim stated above would increase the performance and reliability of Connell's system by protecting the smart card overvoltage and overcurrent.

As per claim 7, Connell discloses the current source is configured to provide a current that is controlled by the power source [col. 4, lines 41-51; col. 4, line 63-col. 5, line 3].

### ***Allowable Subject Matter***

10. Claims 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
